Summer School 2022

- The theoretical framework in our analysis will be based on ecological dynamics.
- The performance problem faced by the Manchester City squad is shots conversion to goals ratio.
- To win the match against Manchester United!!!

VS

Role of the Sport Psychologist in a Department of Methodology

Statistics or people?

```

What should the psychologist be aware of before, during, and after the intervention?

Before:

- How does the team respond to situations that may not occur frequently?
- How do the players respond to change? (Individually and collectively)
- Team culture? (Form of life – macro & micro level)

During:

- Appraisal states of individual players
- How is feedback given?

After:

- How fatiguing was the cognitive load on players? (More cognitively demanding than a deterministic model)
- How did the athletes respond to the manipulation of task constraints?

Interdependency of decision-making

What factors can affect decision-making in this context?

- Match status (winning or losing)
- Coach instructions and tactics (task constraints)
- Weather and surface conditions (environmental constraints)
- Patterns of play (past learning experiences and task intention)
- Opponent action tendencies (stable/dynamic contextual information) - interdependency of decision-making
- Opponent positioning (more space on one particular side / dynamic contextual information) - interdependency of decision-making

- ***Data implemented:*** Wyscout and StatsBomb data alongside Dartfish video clips.
- **Wyscout** data allowed us to identify the initial problem of poor shot conversion.
- **Statsbomb** data was obtained and made into visuals in of RStudio.
- **Dartfish** was used for creating video clips of critical incidents in games which we lost or drew.

Shots maps and statistics from games that ended in loss & draw for Manchester City

Team	Goals	xG	Shots(% on Target)		Passes (%)		Possession (%)	Losses	Recoveries	Duels (%)	
Manchester City	1.2	2.07	15.2	32.9	506	82.2	60.09	122.8	85.2	227	50.8
Opponents	1.6	1.67	11.2	34	309	73.1	39.91	118.8	72.4	227	45.9

→ Blocked → Off T

→ Goal → Saved

Shots maps from 5 games of Manchester United where it was draw or losses.

Man Utd Opponents with best xG Shot Map

Includes all open-play and set piece shots // Data via: StatsBombR

Outcome ☒ Goal ☐ No Goal

xG ☐ .25 ☐ .5 ☐ .75 ☐ 1

Date	Match
12/02/2021	Manchester City - Manchester United 3:0
07/02/2021	Manchester United - Reading 0:2
17/01/2021	Chelsea - Manchester United 2:1
14/11/2020	Manchester United - Manchester City 2:2
06/09/2020	Manchester United - Chelsea 1:1

- 3 stage intervention focusing on exploiting the weakness of opposition.
- Creating overload on one side of the pitch.
- Points based system to reward desired action.
 - Attackers need to exploit space to create shots on goal.
 - Defenders need to press opposition to win back possession.
- Emphasise areas of exploitation in the opposition rather than our weaknesses.
- Monitoring cognitive and physiological training load during the session.

Monitoring and Evaluation of the Intervention

Performers as co-designers of the practice task:

- They have first-hand knowledge vs coaches third-person interpretation
- Via observations (coaches) and reflections (players and coaches)
- Make changes based on feedback
- Modify the degree and frequency of the constraint(s) to suit the individual learner
- Using movement variability (change build-up play, no. of defenders/attackers) to evaluate the learner's skill retention and transfer.

North et al. (2016)
Williams et al. (2006)
Woods et al. (2020)

WOMEN

- Firstly we identified the shot conversion problem which contributed to Manchester City WFC losing and draw games.
- We then identified areas of weakness of Manchester United to help inform our training intervention.
- Department of Methodology and Ecological Dynamics theoretical frameworks also informed our training intervention.

- Strengths and weaknesses of the project
 - Too short of a project due to holidays this week
 - Good interventions but sometimes we lack the link between intervention and field application
- The skills developed during the week
 - Communication
 - Quick adaptation and analysis
 - Organisation
- Reflections on working together
 - Interesting to see other point of view and way of working
 - Language barrier can be difficult to overcome
- Any other thoughts on the experience
 - More activities together like football of yesterday to interact more.
